

Register Online: Time saving tip: register your pet online or print info at New Patient.

Medical Record: Bring any medical or preventative care records that will help us diagnose your pet's medical condition. If transferring from another hospital, we will call on your behalf to request medical/vaccine records to be faxed over.

Diagnostics: We may have to perform some diagnostic tests to confirm our tentative diagnosis. These tests may include: intestinal parasite screen, heartworm test, internal organ function test, complete blood cell counts, radiology, ultrasound, etc. Some tests may require a stool, blood, or urine sample. If possible, don't let your pet defecate or urinate before coming to the hospital.

Come with Questions: Write down any questions or concerns to be asked our team and DVM.
